Unwanted Hair **Gone**
with the latest leading **SMARTDiode** technology

SMARTDiode

The future of laser hair removal is here!

Tired of continually removing hair with traditional methods?

It is estimated that 75% of women would like to remove areas of hair growth permanently!

SMARTDiode is the answer!
Superfast and pain free!

How does **SMARTDiode** work?

Utilising the latest evolution in Laser **SMARTDiode** technologies – **SMARTDiode** is the latest method for the removal of unwanted hair, superfast, safe and pain free!

A **SMARTDiode** treatment uses selected wavelengths of low energy light rapidly pulsed onto the skin (180 times a minute) to gently heat the target hair follicles to cause terminal damage directly to the hair's chromophores and prevent hair regrowth. Endorsed by leading medical experts the **SMARTDiode** is safe and highly effective in the treatment of permanent hair reduction.

How long does a treatment take?

Using revolutionary 'slide & glide' delivery a **SMARTDiode** treatment is completed in minutes. The treatment applicator is swept back and forth repeatedly across the designated area whilst rapid pulses of low energy light are pulsed into the skin ensuring full coverage and effective treatment.

Does it hurt?

Unlike traditional laser or IPL, using high energy levels that may cause discomfort and pain, a **SMARTDiode** treatment is gentle and comfortable, resulting in a pleasant warming of the skin. Active skin cooling through the applicator ensures complete comfort even in the most sensitive areas.

"I couldn't believe my treatment, it was so easy, comfortable, completely pain free and really fast, taking less than 10 minutes"

Who is it suitable for?

A **SMARTDiode** treatment can be performed on all skin types. The **SMARTDiode** technology of low energy pulses allows for the successful treatment in both dark and fair skin types alike, even tanned skin. Suitable for both women and men, **SMARTDiode** is the answer!

How many treatments will I need?

Each **SMARTDiode** treatment effects approximately 30% of the hair within the target area. We recommend a minimum of 6 treatments, with some hair types requiring more. The average for a successful program is 8 treatments.

Before The Treatment

- The area to be treated must be clean and free from all topical solutions. Please shave the area 2-12 hours prior to treatment. Shaving immediately prior to treatment may cause extra sensitivity to the skin and we advise to allow plenty of time prior to appointment.
- Tanned skin can be treated provided the tan is not active. Therefore, avoid direct sun exposure to the area being treated for at least 3 days prior to treatment. Sensitive or sunburned skin will not be treated.
- The use of tanning creams must be discontinued 2 weeks before treatment.
- You must avoid bleaching, plucking or waxing hair for 4 weeks prior to treatment and do not wax, epilator or pluck or remove hair by any other means than shaving during the course of the treatment.
- You must avoid the use of essential oils for 48 hours prior to treatment.
- Do not use depilatory creams 1 week prior to treatment.
- If you have a history of cold sores you may take your usual medication 5 days before and 5 days after treatment.
- If you have been on antibiotics, we ask that you leave 2 weeks between finishing the course and having a **SMARTDiode** treatment.

After The Treatment

- In the unlikely event you experience any redness or swelling after your treatment, apply a soothing lotion such as aloe vera or cool pack at home if required.
- We advise that you do not shave or apply deodorants /perfumes to the treated area for 24-48 hours post treatment.
- We advise that you avoid very hot baths, saunas, hot tubs/jacuzzi, massage treatments or athletic activities for 2-3 days after treatment.
- Your skin may have increased sensitivity to the sun and we recommend that you use a factor 30+ sunscreen and avoid direct sun exposure on the treated area and sunbeds for at least 4 days after your treatment.
- If you experience (rarely) itching in the treated area, avoid scratching the skin. You can take an antihistamine e.g. Piriton to alleviate the irritation.
- We advise not using any skincare that contains AHA, Glycolic Acid, Salicylic Acid or Retinoic Acid (e.g. Retin A) for 3-5 days following treatment.
- We recommend that you always maintain a good skincare routine with frequent hydration or moisturisation on a daily basis.

If you have any concerns or seek further advice please contact your trained **SMARTDiode** practitioner.
